

## OXYTANE

In today's world of hydrocarbon fuels, which unfortunately is a constant consumable in our everyday lives and drives the engines of our world which keeps our planet's population on the move, our industries polluting in the name of profits and progress all in the absence of newer cleaner less polluting technology and fuels which are available but financially out of reach to the general population.

Emissions controls and reduction on a global scale is a dilemma shared by all the world powers and peoples of their country, it's an issue that affects everyone on our planet and a major dilemma that has to be solved for the future health and sustainability of our world and all its inhabitants. It seems that the problems and issues at the heart of the matter dominate the gatherings attended by the member states of the Kyoto Protocol and the Paris Agreement with little or no tangible solutions.

The member states of these accords set themselves a 20 year time line to reduce global fuel emissions by 20%, the said time line expires in 2024 with no real actionable solution in site. We, the people and citizens of our world are all experiencing the same problems, ever increasing fuel prices, efficiency, economy and emissions, these problems affect everyone and are a topic that is ever present in our daily lives. It's true that vehicle and engine manufacturers are striving to produce ever more efficient engines give increased economy and reduced emissions, however, if these more efficient engines are using the same contaminated fuels used to day, the emissions problem will still be present on a slightly reduced level but not eliminated.

In the absence of a cleaner more efficient fuel that solves the global emissions problem, We at Innovative Chemicals Limited have brought to the world market a revolutionary product that is cost effective, both easy and practical in its application, scientifically proven to dramatically reduce fuel emissions to well below guide lines set by various governments, affords its user exceptional fuel economy that makes a sizeable financial benefit to both domestic households and industry alike.

**Oxytane** was invented and produced by a brilliant man who has dedicated 20 plus years of his life to researching and developing a product that has a profound positive and environmentally friendly effect when mixed with fuel and consumed in the modern internal combustion engine.

Cars, generators, industrial machinery, ships, motor boats and every machine that operates with fuel as its main consumable benefits from the many advantages and improvements Oxytane generates for its user.

If You could buy a cost effective, scientifically proven, environmentally friendly product that can give you the following benefits by simply adding it to your fuel, would you use it?

- a. Reduce fuel emissions by 40% to 60%.
- b. Increase fuel economy by 20% to 65%.
- c. Increase a vehicle's acceleration.
- d. Smoother more responsive drive.
- e. Reduction in smoke generated.
- f. Reduction in noise levels.
- g. Reduced vibration.
- h. Lower maintenance costs.
- i. Increased torque.

- j. Increased horse power.
- k. Cleaner smoother running engine.

These questions are of course rhetorical, the good news is that all these benefits are rolled up into one product "**OXYTANE**".

In general, the above benefits are the most obvious and noticeable. Haulage companies with fleets of trucks are saving enough money on their fuel budgets that can actually pay their drivers wage bill with the increased fuel economy attained by using **OXYTANE**.

With savings on fuel, industrial companies increase their operating profits adding to the bottom line.

Savings on fuel can make an industrial company more competitive on their quotes as transport and other machines used consume a lot less fuel.

Companies that operate in countries that still impose a Carbon Tax can considerably reduce those taxes by reducing their emissions using **OXYTANE**.

Public listed companies that consume vast quantities of fuel in their industry to produce their goods or to service their clients will have all the advantages listed above with the addition of reporting higher operating profits which will have a positive impact on their listed share price.

People will always ask, will it damage my engine, I always answer, do you worry about diesel or petrol damaging your engine, the answer is no, you reply that **OXYTANE** has the same certification as diesel fuel issued by Intertek UK and Bureau Veritas, these two organizations certify all fuels, lubricants and other petroleum products that are sold to the general public today.
